

The XM Satellite Radio system provides me, the consumer, with the ultimate ability to choose what I hear on my radio. When I'm stuck in traffic, there is no other information source so readily available as the XM Instant Traffic for Phoenix. I click a button and instantly get the information I need. By stiffling XMs new and innovative services, you are limiting the choices available to the consumer. Let us decide with our dollars who should and should not be in business. It's all about choice.

I strongly urge the FCC to reject NAB's petition 04-160 and instead support the rights of consumers.
